- NOTES :
1. The above numerical values of total rated loads are based on crane strength only. The total rated loads based on stability may lower than those in the above table depending on the loading conditions and the types of the chassis.
  2. Rated Lifting Capacities in these tables depend on condition that crane is set level on firm level ground.
  3. The mass of the hook (90 kg), slings and all similarly used load handling devices must be added to the mass of the load.
  4. For boom lengths not shown, use the rated lifting capacity of next longer boom.
  5. 13.04m boom means  $\sphericalangle$  mark on 4th boom section side plate is half seen.
  6. When the lifting load is heavier than 6,000kg, number of part lines must be 6. In case of 6,000kg or less, number of part lines must be 4. Load per line must not surpass 14.7kN{1,500kgf}.

WORKING RANGE

NOTE: The above lifting heights and boom angles are based on a straight (unladen) boom, and allowance should be made for boom deflection obtained under laden conditions.
